1. Brand Identity & Product Strategy

CareerBoost AI is a platform built for MBA students and fresh graduates who are at that anxious stage where placements are right around the corner and they still don't feel ready. The idea is straightforward — give students access to the kind of honest, recruiter-level feedback that normally only shows up after they've already blown the interview.

It covers three things: fixing resumes so they actually clear ATS filters, giving students a realistic space to practice interviews, and then telling them exactly what went wrong and how to fix it. Not vague encouragement. Actual feedback they can use.

Target Market

CareerBoost AI targets a very specific window in a student's life — the few months before placements begin, when the pressure is real and the preparation gap starts to show.

Segment	Who They Are
Primary	MBA students at FIIB actively preparing for final placements. The urgency is already there — you don't have to convince them the problem exists. They're living it.
Primary	Students preparing for internships and pre-placement interviews. Earlier in the journey but equally motivated once placement season is visible on the horizon.
Secondary	MBA students across Delhi NCR B-schools. Same problem, different campus. Once the model works at FIIB, expansion is natural.
Secondary	Final-year undergraduate students. Engineering and commerce graduates stepping into the job market who've often never had a proper mock interview in their life.
Secondary	Fresh graduates who haven't landed a job yet. They're applying everywhere, getting rejected, and have no idea why. A platform that shows them exactly what's wrong is what they need.

Customer Pain Points

- **Poor resume structure and ATS compatibility:** Students spend hours on their resume and still get filtered out before a single human reads it. ATS software isn't looking at design — it's scanning for keywords in the right format. Most students have no idea this is happening, so they keep applying and keep getting ignored.
- **Lack of structured interview practice:** Practicing with a batchmate who's equally clueless isn't preparation — it's just conversation. Without structure, scoring, or real feedback, you don't actually know where you stand.
- **Low confidence during interviews:** Confidence comes from repetition in realistic conditions. Students who've never sat through a proper mock interview tend to freeze, ramble, or undersell themselves when it actually counts.
- **Lack of personalized feedback:** Being told to 'be more confident' is useless if you don't know what that looks like in practice. Students need feedback tied to what they actually said, not generic tips from a blog post.

2. Brand Rationale & Unique Selling Proposition

The market already has resume builders. Students know this. So CareerBoost AI doesn't position itself as a prettier template tool — it positions itself as a data-driven placement preparation partner. That's a meaningfully different claim.

A resume builder gets you a document. A placement preparation partner gets you placed. One helps you write. The other helps you win. The whole product strategy flows from that distinction.

USP: *"The AI platform that simulates real recruiter evaluation and provides data-driven feedback to improve interview success."*

Competitive Differentiation

Unlike traditional coaching or peer practice, CareerBoost AI offers something that scales — feedback that is consistent, unbiased, and available at 2 AM when the panic sets in.

Dimension	Traditional Prep	CareerBoost AI
Availability	Fixed hours, scheduled sessions	24/7, on-demand
Feedback quality	Subjective, inconsistent	Structured, data-driven
Resume screening	No ATS evaluation	ATS compatibility scoring
Scalability	Limited by faculty/peer time	Unlimited practice sessions
Industry specificity	Generic preparation	Role & sector-specific modules

3. FAB Analysis (Feature – Advantage – Benefit)

FAB is a framework that keeps you honest about what you're actually selling. The feature is what the product does. The advantage is why that feature matters. The benefit is what the student actually walks away with. Most people stop at the feature and hope the customer connects the dots themselves. They don't. You have to make the connection explicit.

Feature	Advantage	Benefit to Student
AI Resume Analyzer	Evaluates resumes using ATS-style screening criteria	Higher probability of clearing the first shortlisting filter and reaching a real recruiter
Mock Interview Simulator	Simulates HR and technical interviews in a realistic environment	Builds genuine interview confidence because the brain treats familiar situations differently
Personalized Feedback Reports	Detailed, response-level insights on strengths and specific weak points	Faster, targeted improvement instead of guessing what to fix

Industry-Specific Modules	Preparation tailored to the student's target role and sector	Every practice session is relevant — no time wasted on prep that won't come up in the actual interview
Performance Analytics Dashboard	Tracks progress across sessions with measurable scores	Students can see exactly where they've improved and where they're still losing marks, turning effort into visible progress

4. Lead Generation Strategy

Lead generation here isn't about running ads or spamming LinkedIn DMs. It's about showing up in the right place, at the right moment, with something that actually helps. Students are skeptical — they've sat through enough workshops that promised everything and delivered nothing. The outreach strategy has to earn trust before it asks for anything.

Pre-Approach Strategy

Before talking to a single student, do the homework. The quality of every conversation depends on preparation.

- **Identify students preparing for placements:** A first-year student thinking about placements two years from now isn't the audience right now. A final-semester student with placement season starting in eight weeks is. Focus energy where the urgency already exists.
- **Understand placement timelines:** Different colleges run placement drives at different points in the year. If the pitch lands in November when the drive is in March, it'll be forgotten by the time they care. Pitch when the anxiety peaks.
- **Study recruiter expectations:** Research the companies that hire from FIIB. Understand the roles, competencies they assess, and how their interviews are typically structured. That knowledge sharpens the product and makes every sales conversation more credible.

Lead Generation Channels

- **Campus Workshops:** Run sessions on resume writing or interview skills — but make them genuinely useful. Not a product pitch with a skill label on top. One session that actually helps them does more for trust than ten promotional emails.
- **Placement Preparation Seminars:** Live demos showing how ATS filters work and how the AI analyses a real resume. When a student sees their own resume scored in front of them, the product becomes tangible in a way that a brochure never could.
- **Peer Referral Programs:** Students talk. If someone from FIIB gets placed and credits CareerBoost AI, that story moves fast through the batch. Build a referral system that gives users something real for bringing a friend in.
- **LinkedIn Outreach:** Post content that actually helps — how ATS filters work, the resume mistakes most students are making, what interviewers are scoring. When students start saving and sharing posts, trust builds at scale for free.

5. Cold Calling / Outreach Script

The goal of any first conversation is to not sound like a sales call. Students have a well-trained instinct for people who want their money. The script below leads with a problem they already feel, asks before pitching, and makes the first ask so small it's almost impossible to say no to.

"Hey, this is Adarshjit from CareerBoost AI. I've been speaking with MBA students who are getting close to placement season.

One thing I keep hearing is that students put in real practice time but never get feedback the way a recruiter would actually give it. Is that something you've run into too?

We built something that tries to fix exactly that — it scores your resume the same way ATS software does and runs you through mock interviews with actual structured feedback.

Would you be open to a quick 5-minute demo to see what your resume scores right now?"

The script works because it opens with their reality, not the product. It asks a question before making any claim. And the ask — a 5-minute demo — is so low effort there's no real reason to say no. Once they're in the demo, the product does the rest of the convincing.

6. Professional Sales Pitch

If there were two minutes with a student or a placement officer, here's the core pitch:

Here's what actually happens during placement season: students prepare, but they prepare blind. They write resumes from templates and hope a recruiter notices. They practice with friends who have no idea what recruiters are actually evaluating. They walk into the room feeling ready on paper, but they've never been evaluated the way a real recruiter evaluates.

CareerBoost AI fills that gap. It tells you your resume score before you submit. It runs you through the interview and then tells you exactly where you lost marks and why. You stop guessing. You start fixing the actual problems. Students who do that walk into interviews knowing what to expect — and that confidence is real because it was built on real preparation, not hope.

7. Sales Funnel

The funnel maps the full journey from a student who's never heard of CareerBoost AI to one who pays, renews, and refers their friends. Each stage has a conversion rate so you can work backwards from any revenue target and know exactly how many people you need at the top of the funnel.

Funnel Stage	Activity	Students	Conversion Rate
Awareness	Campus promotion, workshops, social content	1,000	—
Interest	Demo sessions and live booth interactions	300	30%
Trial	Free trial access after demo	150	50%
Purchase	Paid subscription conversion	60	40%
Retention	Premium upgrades and renewals	30	50%

The drop at each stage is intentional and expected. Not every student who hears about the product is ready to buy. But every stage that's working well feeds the next one. The most important conversion to watch is Trial to Purchase — that's where the product either earns trust or loses it.

8. Promotion Strategy

The best promotion strategy is one that makes students come looking rather than always being chased. That means creating campus moments worth talking about and putting out content online that's actually worth saving.

Digital Promotion

- **LinkedIn awareness content:** Regular posts on how ATS works, common resume mistakes, and what interviewers are actually evaluating. Not promotional — educational. When students start tagging batchmates, that's reach money can't buy.
- **WhatsApp student groups:** Placement preparation tips shared in the groups students are already in. Useful content earns permission to be there. Pushy promotion gets muted.
- **Placement preparation forums:** Engage in spaces where students are already asking questions about resumes and interviews. Be the helpful one. That builds credibility faster than any ad.

Campus Promotion

- **Resume Review Booths:** Set up a booth, run a student's actual resume through the AI right in front of them, show them the score. That five minute does more than any pitch deck. The product becomes real and personal in a way that's hard to argue with.
- **Mock Interview Challenge:** Turn interview practice into a competition. Run a campus challenge where scores are tracked and top performers get something worth having. People who weren't even thinking about interview prep will show up because it's a challenge. The best marketing doesn't feel like marketing.

- **Career Preparation Workshops:** Sessions on resume writing and interview skills — genuinely useful, not a sales pitch with a topic slapped on top. One workshop that actually helps students does more for trust than ten promotional emails.

The 'Lady in the White Dress' Concept

This is about creating a campus moment that people actually talk about afterward. A brand ambassador in a distinctive white outfit walking through campus, stopping students, and asking a simple question: 'Do you actually know how recruiters are screening your resume?' It's disruptive in the right way. It creates curiosity without being pushy. People stop, ask what it's about, and the conversation starts naturally.

Pair this with a live 'AI vs Human Interview Challenge' where a student goes head-to-head with the platform in front of a crowd, or a live resume critique where someone's real resume gets analyzed in public. These moments generate a story that spreads through a batch in ways that a poster on the notice board never will.

9. Objection Handling (FAQ for Skeptical Buyers)

Not every student is going to be immediately convinced. Some have genuine doubts about AI, some are worried about cost, some just need a little more reassurance. Here are the most common objections and how to handle them honestly.

Objection / Question	Honest Response
Why should I trust AI for interview preparation?	AI doesn't replace human judgment — it gives you structured, consistent feedback based on how real interviews are evaluated. A human coach might be great, but they're not available at 11 PM the night before your interview. The AI is, and it never gets tired or inconsistent.
Isn't practising with friends just as good?	Peer practice is better than nothing. But your friend doesn't know what ATS systems filter for, and their feedback is based on instinct not structure. AI-based simulation gives you scored feedback against actual recruiter criteria — that's a different category of preparation.
Is my personal data and resume safe?	All resumes and interview responses are encrypted and used only to generate your personal feedback. The data is never shared, sold, or used for any other purpose.
What if I don't see any improvement?	The platform tracks your scores across every session, so improvement is measurable, not a feeling. If the scores aren't moving, the feedback tells you exactly why. And with unlimited practice on the premium plan, there's nothing stopping you from putting in the reps.
Is Rs. 999/month worth it as a student?	One coaching session at most institutes costs more. A decent reference book costs about the same. And those are one-time things. For Rs. 999, you get unlimited practice, analytics, and resume analysis for a full month — available any time. For a student who's serious about placements, it's one of the cheaper bets you can make.

10. Negotiation Strategy

Not every student is going to say yes at the listed price. Some genuinely can't afford it. Others will hesitate because it feels like a big commitment for something they haven't fully tried yet. Good negotiation isn't about caving on price — it's about having smart alternatives that still get them using the product.

SPIN Selling Framework

SPIN works because it leads the student to their own conclusion rather than forcing yours on them. People trust what they figure out themselves far more than what someone tells them.

Type	Question	Purpose
Situation	How are you currently preparing for placements?	Fact-finding. You're learning where they are so you can meet them there. No judgment, no pitch yet.
Problem	Do you feel your resume is where it needs to be? What about your interview confidence?	You're nudging them to put words to a pain point they already have. Most students will admit they're not confident.
Implication	If you go into interviews without having practiced in a realistic setting, that first shortlist is probably going to be the hardest.	You're helping them feel the real cost of not preparing. Not scaring them — making the stakes concrete.
Need Payoff	If after every practice round you knew exactly what to fix, how differently do you think you'd walk into the actual interview?	They answer this themselves. Whatever they say is more convincing to them than anything you could tell them. That's your close setup.

BATNA (Best Alternative to a Negotiated Agreement)

BATNA is what you fall back on when the standard offer doesn't land. The goal isn't to give away the product — it's to lower the barrier to entry enough that the student gets in and experiences the value themselves.

- **Discounted campus bundle subscription:** Go to the college directly and negotiate a subsidised batch rate. If FIIB buys access for 200 students at a reduced per-head cost, that's a better outcome than chasing individuals one at a time. And institutional backing gives the product automatic credibility.
- **Group subscription plans:** Let three or four friends split a subscription. Each person pays less, the group collectively pays more than one individual plan, and friend groups who study together on the platform tend to stick around longer because the habit becomes social.
- **Limited free access with upgrade incentives:** Give someone a full week of premium access, then step them back to the free tier. The moment the cap kicks in — when they can't run another mock interview the night before their prep session — that friction is the conversion. It's not pressure. It's letting the product make its own case.

11. Pricing Strategy

CareerBoost AI runs on a freemium model — and for a student audience, that's not just the smart call, it's the only call that makes sense. Students are skeptical of paying for things they haven't experienced. They need to use the product, feel the value, and then decide. The freemium structure removes every excuse not to try it.

Free Tier

The free tier has to be useful enough that students take it seriously, but limited enough that serious students hit a wall. That wall is the upgrade trigger.

- **Limited resume analysis:** They get a score and top-level feedback — enough to prove the product works and show them problems they didn't know their resume had. Not enough to fix everything. They see the gap. They want to close it.
- **One mock interview per week:** A student in active placement prep wants to practice every day. One session a week is genuinely frustrating for someone serious. That frustration is intentional — it's the moment they start thinking about upgrading.
- **Basic feedback:** Direction but not depth. The difference between knowing 'your answer structure needs work' and knowing exactly which part lost you marks and why — that gap is what premium closes.

Premium Tier (Rs. 999 – Rs. 1,499/month)

Roughly Rs. 1,000 to Rs. 1,500 a month. A single coaching session at a decent institute costs more. A good reference book costs about the same. And this is available at whatever hour the panic hits. For a student who's serious about placements, this is one of the cheaper bets they can make.

- **Unlimited resume analysis:** Applying for finance this week and consulting next? Tailor the resume and run it again. No cap, no waiting. Keep refining until the score reflects it.
- **Unlimited AI interviews:** Practice daily. The improvement is cumulative and the analytics show it over time. There's nothing holding back the reps.
- **Industry-specific preparation modules:** Preparation built around the actual role and sector being targeted. Not generic interview prep — specific prep for the specific job.
- **Performance analytics dashboard:** Track the trajectory over time. Which question types are consistently strong? Where are marks still being dropped? It stops being about how a session felt and starts being about what the numbers show.

12. Key Success Metrics

If there's no measurement, it's just guessing. These four numbers tell you whether CareerBoost AI is actually working or just looking like it is.

Metric	What It Measures	Why It Matters
Customer Acquisition Cost (CAC)	Total spend divided by number of paying users acquired	If CAC exceeds Rs. 999 (monthly revenue per user), the acquisition model is broken. Track this every campaign cycle.

Trial to Paid Conversion Rate	% of free trial users who upgrade to paid	The most honest verdict on whether the product delivers during the trial. If this is low, the trial experience needs work — not the price.
User Engagement Rate	Weekly active sessions, resumes run, interviews completed	Signups are vanity. Sessions are signal. A student who signed up and never came back is a missed opportunity, not a user.
Placement Outcome Improvement	Placement rates of CareerBoost AI users vs. non-users	The ultimate proof of value. If users get placed at higher rates and the data shows it, every future sales conversation becomes dramatically easier.

13. Closure Strategy

Everything in the sales process — the outreach, the demo, the SPIN questions, the trial — builds toward this moment. The close isn't a trick. It's the natural end of a conversation where the problem has been established, the solution has been shown, and the risk has been removed.

"Based on what you've shared about your prep, CareerBoost AI addresses exactly what you mentioned — the resume clarity and the interview confidence. We're giving FIIB students a 7-day full premium trial this week, no payment needed to start. Want me to activate that for you right now?"

This close doesn't pressure. It doesn't run through a feature list. It references what the student actually said, making the offer feel relevant to them specifically. The ask is a free trial, not money. Saying yes costs them nothing. And once they're in the platform with real practice sessions underway, the product takes over from there.
